

HEALTH CARE

OIG Compliance Program

Developing and implementing a Medicare compliance program in accordance with guidance from the Office of the Inspector General (OIG) is a relatively new endeavor for most health care entities. Yet as hospitals, physician practices, behavioral health organizations, and skilled nursing facilities rush to do so, they often forget the most critical component of the government's recommendations: that the program be an ongoing, quality-based one that becomes an integral part of their organization.

We Can Help

Moss Adams LLP takes a proactive approach to OIG compliance to meet the needs of our health care clients. Our team of highly specialized health care consultants has developed a comprehensive compliance program that we can help you integrate into your organization.

Initially, we work with you to:

- Develop a compliance structure for your organization based on current or recommended processes
- Acquaint your compliance officer and compliance committee with specific issues related to Medicare compliance
- Conduct a one-day strategic education and training session to develop a work plan and timeline for implementation of your compliance program

Once the organizational structure for OIG compliance is in place, we:

- Provide you with template documents, including specific compliance policies, procedures, and forms recommended by the Centers for Medicare & Medicaid Services
- Work with your compliance committee to customize and implement these documents
- Develop and implement the three integral processes needed for your compliance program to become a working part of your organization: Lines of Communication, Audit and Monitoring, and Education and Training

Following implementation, we serve as an ongoing resource to your organization as your OIG compliance program continues to develop. We can also provide assistance for future compliance needs to help maintain your program at an optimal level.
