Dan Flaherty, CFA – Northeast Investment Banking

Contact:
dflaherty@figpartners.com
Office - (404) 601-7225
Cell - (404) 991-8724

Mr. Flaherty joined FIG Partners in September 2011 and has 10+ years of experience in the community banking industry. Prior to joining FIG Partners, Mr. Flaherty worked in the investment banking divisions of Sterne Agee (Atlanta, GA) and the Carson Medlin Company (Tampa, FL), providing corporate finance and investment banking services to Southeast-based community financial institutions. Mr. Flaherty's experience includes advising community banks on strategic options, capital planning, sell-side mergers, buy-side mergers and provided numerous types of bank valuations including closely-held, going private, core deposit intangible and goodwill impairment valuations. Mr. Flaherty has participated in 51 M&A transactions, representing over \$1.1 billion in deal value, 28 capital offerings and completed more than 150 bank valuations in his career. In April 2017, Mr. Flaherty became one of eleven partners at FIG.

Mr. Flaherty received a B.A. in Economics from Tufts University, an M.B.A. in Accounting and Finance from the University of Tampa and is a CFA charterholder. Mr. Flaherty holds the Series 7, 24, 63 & 79 FINRA licenses. Mr. Flaherty, a New England native, grew up in Fairfield, CT and is a graduate of Fairfield Prep.

Recent Transactions

- Common Stock follow-on of \$40M by First Bank (Hamilton, NJ) as a co-manager May 2017
- Acquisition of State Bank by Trona Valley FCU (Green River, WY) for \$5.7M April 2017
- Branch purchase of \$31M in deposits by Salisbury Bancorp (Lakeville, CT) from ES Bancshares (New Paltz, NY)
- Common stock offering of \$8.5M for Highlands Bancorp, Inc. (Vernon, NJ) December 2016
- Common stock offering of \$5.0M for First Colebrook Bancorp, Inc. (Colebrook, NH) November 2016
- Sale of Island Bancorp, Inc. (Edgartown, MA) to Independent Bancorp, Inc. October 2016
- Common stock offering of \$9.5M for Gold Coast Bank (Islandia, NY) June 2016

- Sale of Canon Bank Corporation (Colorado) to Glacier Bancorp July 2015
- Sale of Lenox National Bank (Lenox, MA) to Adams Community Bank April 2015

Ricardo Diaz

Ricardo Diaz
Head of Fixed Income
(404) 601-7248
rdiaz@figpartners.com

Recent Loan Sale Highlights:

\$65.6 million in transaction value

16 transactions totaling more than \$270 million since trading platform launch

Ricardo Diaz joined FIG Partners in 2010 and has 23 years of financial services and investment banking experience. Ricardo helped launch the firm's fixed-income division and leads the FIG team responsible for fixed-income sales and trading, advisory and capital markets. Prior to joining FIG, he was a Founding Partner of Vertical Capital Solutions, a valuation and advisory firm in the structured products market. Before that, he was a Managing Partner and Founder of Angel Oak Capital Partners, a hedge fund investing in fixed-income securities. Earlier in his career, he was Managing Principal and Founder of Terminus Asset Management Company; Managing Director in the Principal Finance Group at SunTrust Robinson Humphrey; Portfolio Manager at AIG Sun America Life Insurance. He also worked in Fixed-Income Capital Markets at both Merrill Lynch and Bank of America. Ricardo received his Bachelor of Arts degree in Economics and Political Science from Northwestern University.

March 2017

March 2017

FIG Partners Served As Broker For \$13 Million Residential Mortgage Loan Sale

March 2017

FIG Partners Served As Broker For \$6 Million Commercial Real Estate Loan Sale

May 2017

FIG Partners Served As Broker For \$6 Million Hospitality Loan Sale

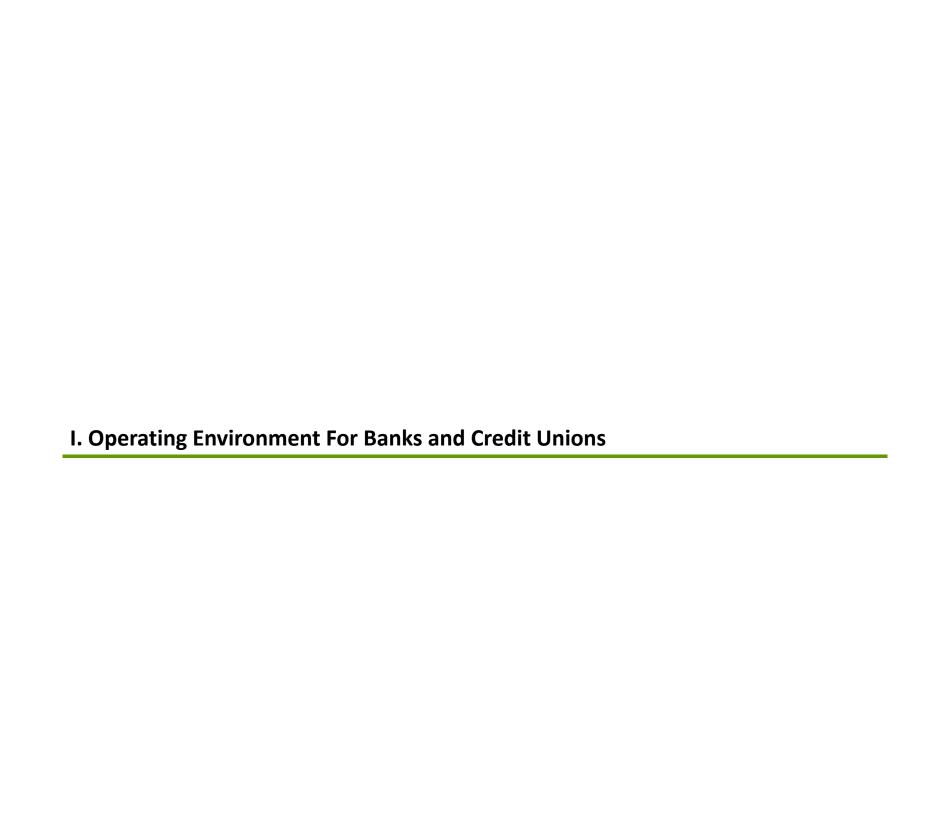

Executive Summary

- ☐ The credit union industry is trending with many new strategic initiatives:
 - 1. Operating environment for banks and credit unions
 - 2. Switch to risk based capital
 - 3. Balance sheet strategies
 - 4. M&A Activity
 - 5. Potential for Alternative Capital Sources
 - 6. Increased Commercial Lending
- ☐ If these trends continue to gain momentum, credit unions will operate more closely to that of commercial banks and it would put the long term credit union benefits in jeopardy (i.e. tax exemption)

U.S. Bank and Credit Union Size Comparisons

September 2016

	Banks	Credit Unions
Total industry assets	\$16.86 trillion	\$1.29 trillion
JP Morgan Chase total assets	\$2.12 trillion	
Wells Fargo Bank total assets	\$1.74 trillion	
Bank of America total assets	\$1.66 trillion	
Citibank total assets	\$1.36 trillion	
Average institution asset size	\$2.8 billion	\$217 million
Median institution asset size	\$192 million	\$27 million
% of institutions with \$27 million or less in total assets	3%	50%
% of institutions with \$100 million or more in total assets	74%	27%
Sources: FDIC, NCUA, CUNA.		

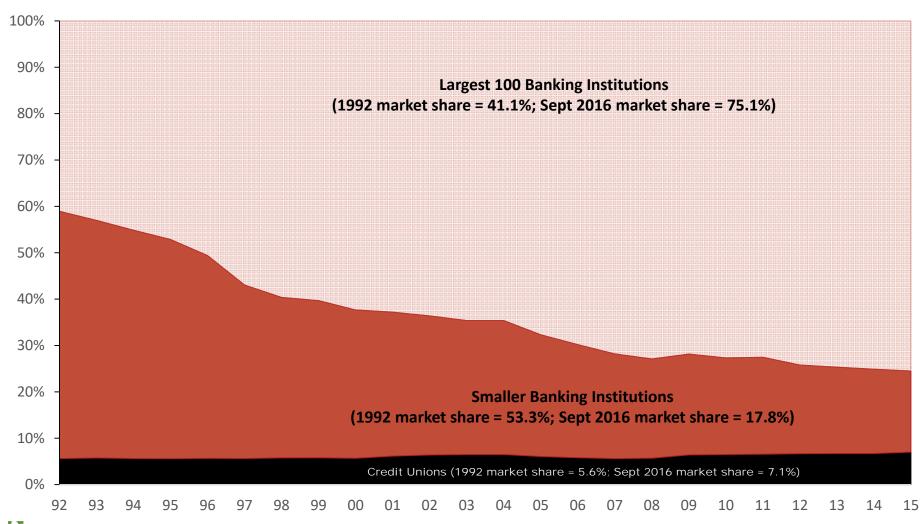

Market Share is Growing

Total Assets - In Trillions.

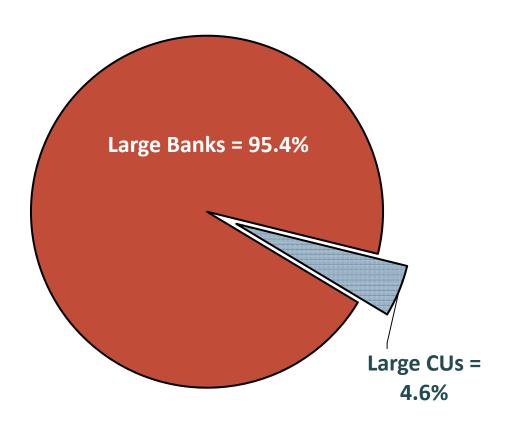

Market Share of Financial Institutions – Is Bigger Better?

Big Banks Increasingly Dominate Market Share of Total Assets

Market Share of Financial Institutions – By the Numbers

Market Share of Assets in Large Financial Institutions

The credit union tax exemption has nothing to do with credit union size – it is based on the credit union unique not-forprofit cooperative structure.

Nevertheless bankers urge taxation of large credit unions by describing them as growing quickly and dominating the market.

The facts however reveal another case of grossly misleading banker rhetoric:

- Billion dollar US banks now control \$15.6 TRILLION in total assets – a 95% market share of large financial institution assets
- Assets in billion dollar US banks grew by \$1.5 trillion in the past two years. That two-year growth total is 89% greater than the current total assets in all large CUs.

Current Credit Union Trends

Loans

Credit union loans outstanding grew 0.9% in April 2017. Other mortgage loans led loan growth, rising 2.1%, followed by new auto loans (1.9%), home equity loans (1.6%), used auto loans (1.5%), unsecured personal loans (1.4%), adjustable-rate mortgages (0.9%), and credit card loans (0.6%). On the decline during the month were fixed-rate first mortgages (0.7%).

Savings

Credit union savings balances declined 0.2% in April, compared to a 2.6% increase in March.One-year certificates led savings growth, rising 0.6%, followed by share drafts (0.4%), individual retirement accounts (0.2%), and money market accounts (0.1%). On the decline during the month were regular shares (-1.3%).

Asset quality

Credit unions' 60+ day delinquency increased from 0.7% in March to 0.8% in April.

Liquidity

The loan-to-savings ratio increased from 78.5% in March to 79.3% in April. The liquidity ratio (the ratio of surplus funds maturing in less than one year to borrowings plus other liabilities) declined from 17.1% in March to 16.6% in April.

Memberships

Total credit union memberships grew 0.4% during April to 111.2 million.

Capital

The movement's overall capital-to-asset ratio remained at 10.4% during April. The total dollar amount of capital increased 1.2% to \$144.3 billion.

- Key Observations:
- Number of institutions is declining
- Balance sheets are growing
- Asset quality continues to improve but for how long?
- Institutions are becoming more leveraged with less liquidity
- Yet margins are declining

Credit Union Overview – Graphical Trends

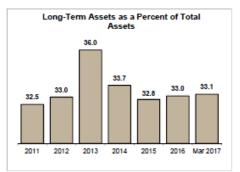

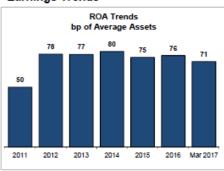

Credit Risk Trends

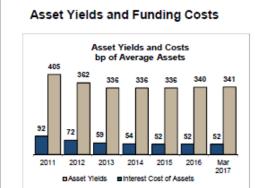

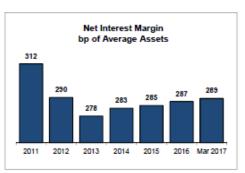

- Key Observations:
- Very steady growth
- What are the risk factors for credit quality going forward?
- How are institutions positioned for rising rates?
- How will institutions improve earnings?

Welcome to Risk Based Capital

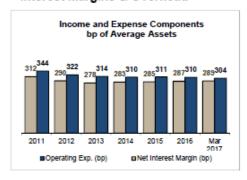

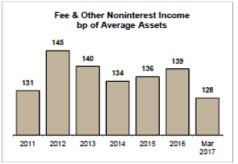

- Consumers continue to seek credit union membership
- Fee income continues to be important
- How will interest costs respond to rising rates?

- Key Observations:
- Most credit unions are less \$200 million
- Yet CUs >\$1B control large majority of assets
- ROA improves with asset size
- All assets sizes are >10% net worth ratio

First Quarter 2017 – Results By Asset Size

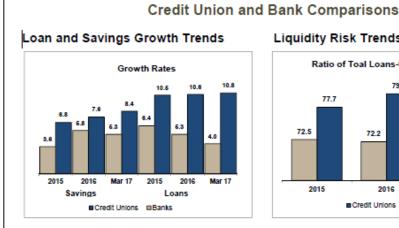

- Key Observations:
- All categories go up by asset size
- Bigger institutions grow faster, have higher liquidity risk exposure, better credit profiles, more interest rate risk exposure, more earnings and less solvency
- ROA trends upwards but still strong across the board

Credit Union / Bank Comparison

		Credit	Unions		Banks

Productivity Employees per million assets	0.21	0.21	0.22	0.22	0.12	0.12	0.13	0.1	

- Key Observations:
- There are more credit unions than banks (barely)
- Yet significantly less assets
- Much lower number of branches per CU, surprising
- CUs are growing faster (much faster)
- Asset quality is weaker at banks
- CUs have more employees

Credit Union / Bank Comparison

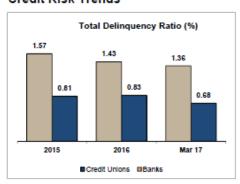

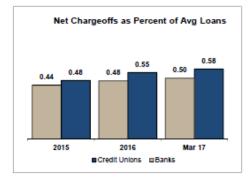

Key Observations:

- Significant gap between growth rates at banks and credit unions
- Charge offs are the same but more delinquencies at bank (more risk?)
- Banks are more profitable

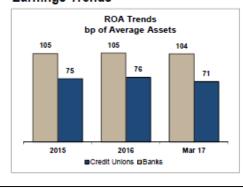

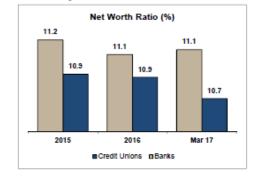

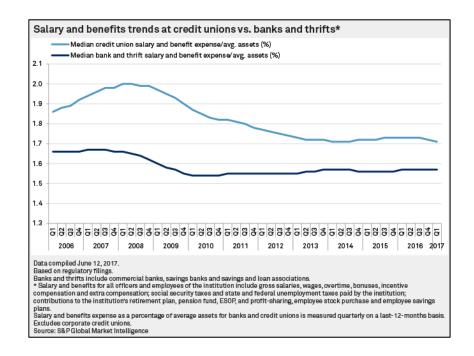

Earnings Trends

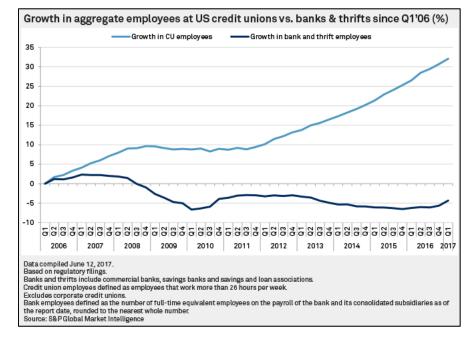

Solvency Trends

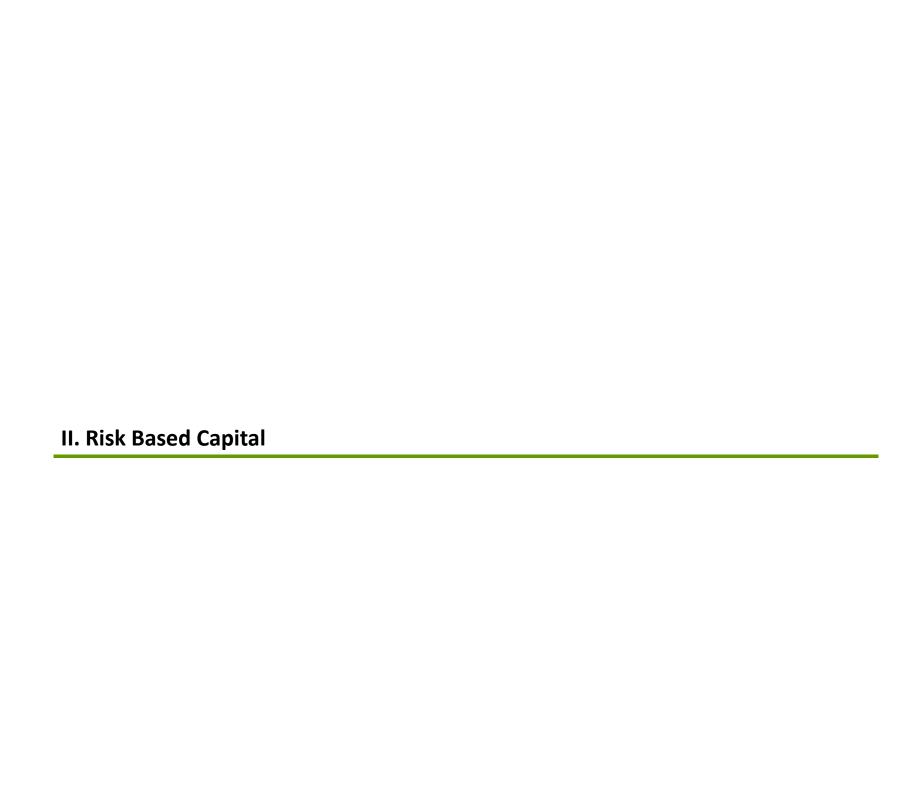

Employee Trends

- Key Observations:
- Employees are gravitating toward credit unions attracting talent?
- Expenses are declining at both

Welcome to Risk Based Capital

What is the Risk-Based Capital Rule?

It is a finalized rule from NCUA that would require a second, complex calculation of the capital level of a credit union. Unlike the simple leverage ratio (net worth to assets), this new ratio involves many variables to be factored in the calculation.

What effect does the final RBC rule have on credit unions?

To be considered well-capitalized by the NCUA, credit unions will have to have a minimum RBC ratio of 10.5%, as well as a net worth to assets ratio of 7%. If credit unions fall below either one of these, they may be subject to regulatory action to improve the ratio which is deemed too low.

What is the main concern with the RBC rule amongst credit unions?

While the concept seems straightforward, these decisions made locally cannot be "scaled up" to a single national formula appropriate for every credit union. One commentator stated, "It's obvious that neither man nor model can adequately assess a given asset's risk under all circumstances before the fact." Or said more succinctly: One size does not fit all.

It will also fundamentally change the way every credit union thinks about capital and superimpose a financial screen on every asset a credit union might consider holding, especially loans. As such, it will mean reduced value for members and impose bank-like thinking when offering products and services.

Financial Impact of Risk Based Capital

- Historically a credit union's capital position was a function of earnings and size
- Now capital position should demonstrate risk within the CU
- Highest risk weighted assets equity investments, noncurrent loans, real estate loans > 20% assets and commercial loans > 20% assets
- Lowest risk weighted assets government securities, share secure loans

Capital F	Ratio Analysis		
	CU #1	CU #2	
Net Worth	21,000	21,000	
Total Assets	250,000	250,000	1
Net Worth Ratio	8.4%	8.4%	
Risk Based Capital	21,000	21,000	
Risk Weight Assets	200,000	230,000	
RBC Ratio	10.5%	9.1%	

CU# 2 is deemed riskier despite the same net worth

Strategic Implications for All Credit Unions

- Should help the NCUA identify riskier institutions and provide better guidance as to which CUs may be in a position of weakness
- Allows regulators to get comfortable with diverse loan books no longer does a CU just do auto or residential loans
- Should protect stronger credit unions from paying higher NCUA insurance fees since the new capital analysis will prevent failures
- More sophisticated regulations should protect both consumers and members
- Will create a systematic shift in 2019 who is prepared, who will be caught in a weak capital spot and could force some mergers
- This is a capital analysis similar to banks
- Does it pave the way for robust commercial lending in the industry?
- Does it pave the way for 3rd party investment in the credit union industry?

Whole Loan Sales

- Whole loan trading volume continues to grow for residential mortgage, small balance commercial and consumer loans
- Loan portfolio sales amongst banks, credit union, lending institutions, principal real estate companies, insurance companies and money managers
- Buyers and sellers include financial institutions of all sizes
- Increasing amount of volume over the last 3 years
- Most trades happen through brokers and generally trade at a premium
- Management of risk exposure
- Nothing in banking happens quickly

Reasons to Pursue Whole Loan Sales

Reasons to Sell Loans:

- Concentration issues related to CRE and increased regulatory scrutiny
- Robust origination platforms that generate more loans than a bank can hold on balance sheet
- Acquired undesired loans in a merger transaction
- Not enough capital on the balance sheet and inability to access capital
- Exit a market that may not be performing up to expectation or outside of existing footprint
- Clean up the portfolio in anticipation of a sale of the Company
- Generate fee income

Reasons to Buy Loans:

- Low loan demand and low-loan-to-deposit ratios
- Enhanced yield targets may be achieved through purchasing loans rather than incurring the cost of origination (i.e. mortgage)
- Excess capital that needs to be leveraged
- Entrance into a new market
- Diversification

Examples of Whole Loan Sales

Highlighted Credit Union Mergers

A Merger Between Two Credit Unions

Finding a Partner

Using professional contacts and NCUA resources, credit unions identify potential merger partners

Negotiating the Contract

Merging credit unions may want to negotiate such issues as:

- Maintaining branches, ATMs, and
 Obtaining board or committee other services to members
- Retaining staff or providing bonuses or severance
- seats for merging credit union's officials
- Issuing a bonus dividend or rebate

S Finalizing the Transaction

NCUA will consider the merger proposal, focusing on the credit unions'-*

- Charter types (federal, state, uninsured)
- Fields of membership (single) SEG, multiple SEG, community)
- If the proposal is approved, the merging credit union may need to hold a membership vote.
- Number of primary potential members
- Financial condition

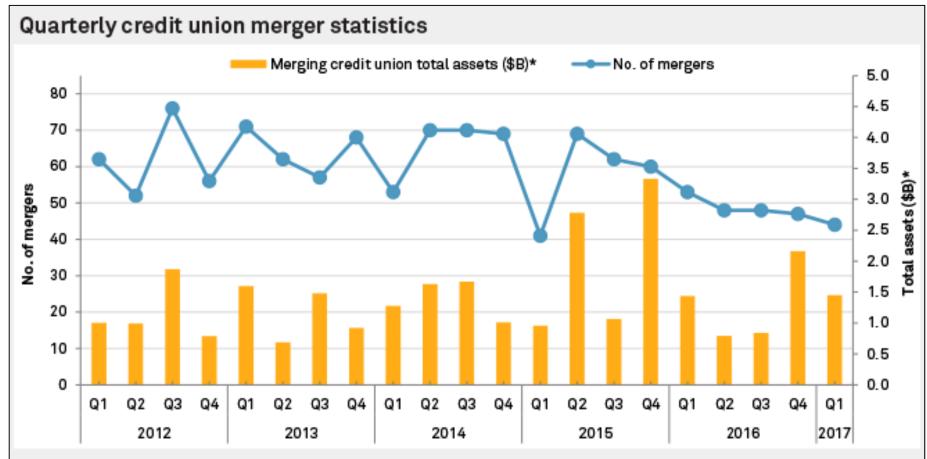

The "Surviving"

^{*} Situation-specific requirements and forms can be found in NCUA's Credit Union Merger and Conversion Manual.

Recent Credit Union Merger Activity

Data compiled May 3, 2017.

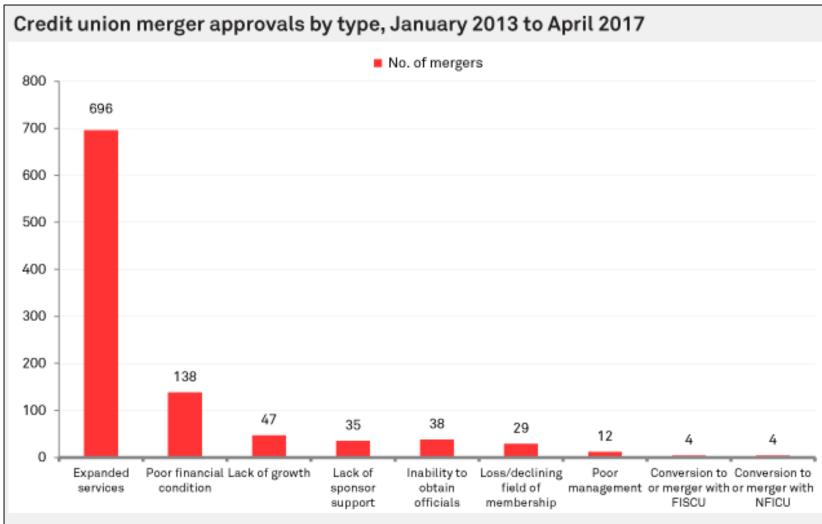

Includes mergers approved from Jan. 1, 2012, through March 31, 2017.

Data compiled May 3, 2017. Based on merging credit union region. Sources: S&P Global Market Intelligence; National Credit Union Administration									

Number of mergers has declined since2014

 Midwest largest CU presence and represented in merger activity

Credit Union Capital Structure

- Capital for credit unions is driven by profitability as retained earnings and ALL are the primary pieces of capital
- Creates a difficult dynamic for credit union if a CU gets in trouble, it can't raise capital but rather it must merge with a stronger CU or receive help from the NCUA
- No ability to fix itself or improve circumstances quickly = risk for the industry

Alternative Sources of Capital

- Common equity unlikely to work for credit union and would have to come from members
- Preferred Equity also unlikely (consider that preferred equity is available to mutual banks which are often compared to credit union in ownership structure)
- Trust Preferred Securities unlikely since we haven't seen these since the mid-2000s
- Debt Instrument most likely solution if alternative capital opened up
 - Unlikely to be convertible
 - Must be subordinate to all other forms
 - Uncertainty around all terms (coupon, maturity, etc.) since no precedents
 - Would sacrifice some retained earnings through coupon payment 6-10%

Alternative Sources of Capital - Principles

Cooperative Ownership Structure:

Alternate capital must have no effect or potential effect on the cooperative ownership structure of credit unions. The ownership of the credit union must remain in the hands of the members of the credit union, regardless of whether they have provided any alternate capital. In the event alternate capital is provided by nonmembers, it can confer no ownership rights. Thus, common stock must be ruled out as a source of alternate capital for credit unions. And of course, without common stock, no debt or hybrid instrument could be convertible to common stock.

Governance:

Alternate capital must have no effect or potential effect on the ability of member-elected boards to govern their credit unions. Governance must continue to be driven by one member, one vote with no special or additional voting rights for providers of alternate capital. In the event alternate capital is issued to nonmembers, it can confer no governance or voting privileges, either at the time or issuance or conditional on the future operations of the credit union. Thus, covenants in subordinated debt or hybrid agreements that provide governance rights to investors in certain situations (such as a deterioration of the financial condition of the credit union) cannot be permitted.

Tax Exempt Status:

Alternate capital would need to be authorized and implemented in a way that has no adverse effect on the tax exempt status of credit unions. This would in part be accomplished by meeting the previous two criteria on ownership and governance. The preservation of the tax exemption would best be reinforced by a statement in the enabling legislation that such capital does not in any way change the tax exempt status of credit unions.

Alternative Sources of Capital – Required Characteristics

Protection

Alternate capital must provide real protection to the National Credit Union Share Insurance Fund (NCUSIF). Any source of alternate capital must be unambiguously junior to the claims of the share insurance fund. It must also be of sufficient maturity to serve as capital. Finally, to achieve the highest status as capital, some forms may need to have non-cumulative dividends.

Disclosure.

Investors in credit union alternate capital must be completely and totally aware of the risks of the instrument. This is not only fair to investors, but also it strengthens the value of the capital in protecting the NCUSIF. To the extent investors are not really aware of their risks, the more difficult it is to pass losses on to the instrument, i.e., the less protection would it provide to the insurance fund. Any loss to an investor in an alternate capital instrument might come as a major disappointment, but it should not come as a total surprise. This requires simple and clear disclosures to investors of the risks of investing in alternate capital, with particular care to distinguish between uninsured alternate capital and insured share certificates.

Suitability

Credit union alternate capital must be "suitable" to the investors that purchase it in the case that the investor is not an institutional investor, for example a member. Suitability requirements go beyond disclosure. An investment is suitable to an investor if he or she has sophisticated investment knowledge, and/or experience investing in similar types of instruments and/or sufficient net worth so that a substantial loss on the investment would not unduly harm the investor. A suitability requirement might obligate a credit union to determine whether the purchase of a subordinated capital certificate is appropriate for a member.

Practical.

Alternate capital must be practical for credit unions to acquire. Some of the capital instruments currently available to depository institutions are only appropriate for very large firms. There must be vehicles for smaller credit unions to reasonably gain access to alternate capital if they wish to. This could take the form either of offering "retail" capital instruments to members, or conducting joint offerings in the capital markets in partnership with other credit unions.

Optional

Alternate capital should be optional for credit unions. For those credit unions willing and able to operate with only retained earnings, there should be no requirement that they also acquire alternate capital.

Financial Impact of Alternative Sources of Capital

- Increased growth for credit unions
- More protection for the NCUA insurance fund
- Likely more services for customers as CUs become larger
- More industry risk as credit unions stretch to leverage capital
- Less CU to CU mergers
- More bank acquisitions
- Better capital ratios

Strategic Impact of Alternative Sources of Capital

- Non-members now have ownership
- Debt servicing issues in times or hardships could see forced bankruptcies or CUs diminish retained earnings capital in order to service debt
- Does this put tax exempt status in jeopardy since CUs would now have access to capital markets??

Commercial Lending Rules Easing For Credit Unions

NCUA Amends MBL & Commercial Lending Rule

On February 19, 2016, the NCUA Board unanimously approved a final member business lending rule that amends Part 723 of NCUA's Rules and Regulations regarding the ability of federally-insured credit unions to make Member Business Loans (MBLs). The majority of the rule is effective January 1, 2017, while the personal guarantee requirement is eliminated 60 days after the rule's publication in the *Federal Register*.

The rule removes the prescriptive underwriting criteria and personal guarantee requirements of the current regulation, thereby eliminating the current waiver process. Instead, the rule allows credit unions to implement a principle-based risk management policy related to its commercial and business lending activities. Addressed as part of NCUA's regulatory modernization initiative, the final rule:

- 1. gives credit union loan officers the ability, under certain circumstances, to not require a personal guarantee;
- 2. replaces explicit loan-to-value limits with the principle of appropriate collateral and eliminating the need for a waiver;
- 3. lifts limits on construction and development loans;
- 4. exempts credit unions with assets under \$250 million and small commercial loan portfolios from certain requirements; and
- 5. affirms that non-member loan participations do not count against the statutory MBL cap.

This rule comprehensively overhauls the way that NCUA approaches commercial lending, from both a regulatory and supervisory perspective. Currently, Part 723 considers commercial lending as synonymous with the member business lending definition under the *Federal Credit Union Act* (FCU Act). The final rule, however, will expand Part 723's scope to apply to commercial loans as newly defined under the proposal. The rule will also delineate which loans are subject to the statutory MBL cap and those which are subject to certain safety and soundness policy and infrastructure requirements.

NAFCU Position on Member Business Lending

"While recovery from the financial crisis remains fragile, credit unions have the capital to help America's small businesses thrive. However, due to the outdated member business lending cap, their ability to help stimulate the economy by providing credit to small businesses is hampered. Removing or modifying the credit union member business lending cap would help provide economic stimulus without costing the taxpayer a dime. In addition, it is worth noting that officials at the Treasury Department and NCUA have expressed support for lifting the MBL cap. Several outside groups from all sides of the political spectrum have also endorsed the legislation including the Consumer Federation of America (CFA) and Americans for Tax Reform (ATR).

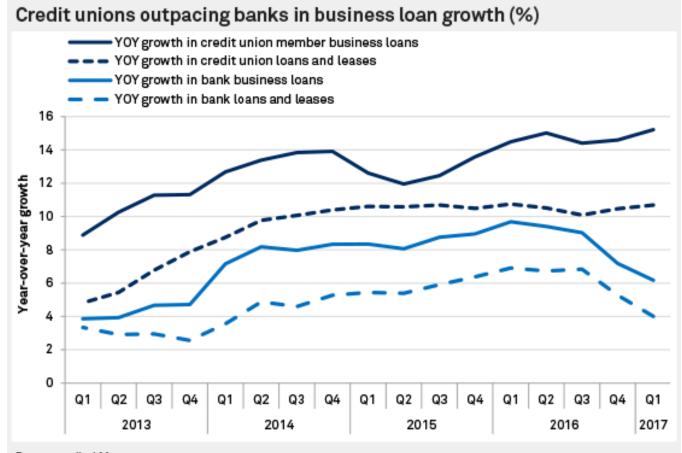

NAFCU has a strong history of supporting credit union member business lending and has testified before the Senate Banking and House Financial Services Committees on the importance of this issue. NAFCU would also support alternatives to a straight member business lending cap lift such as raising the minimum loan amount that would count against the member business lending cap.

We are committed to pursuing all legislative avenues to maximize the possibility of this issue being considered moving forward."

Impact of Revised Commercial Lending Rules

- Continued growth for credit unions
- Credit unions with existing commercial lending expertise are positioned to outperform peers under the new regulations
- Buying a bank for commercial lending expertise has become more attractive
- Credit unions can attract a new pool of human resource talent
- Credit unions can market to a new pool of customers
- Management of commercial lending concentrations
- Increased risk for credit unions

Impact of Revised Commercial Lending Rules

Data compiled May 31, 2017.

Based on regulatory filings.

Bank business loans and bank total loans include commercial banks, savings banks, and savings and loan associations.

Total bank and thrift business loans = the sum of commercial real estate loans secured by nonfarm, nonresidential properties, construction and development loans, multifamily loans, commercial and industrial loans, agricultural production loans and farm loans

Credit union member business loans = loans, lines of credit or letters of credit, including any unfunded commitments, where the borrower uses the proceeds for commercial, corporate, business investment property or venture or agricultural purposes

YOY = year-over-year

Source: S&PGlobal Market Intelligence

At the end of the first quarter of 2017, U.S. credit unions had a total of \$62.72 billion in business loans outstanding. That represented 15.2% year-over-year growth. By comparison, banks grew business loans by 6.2% but had nearly \$3.92 trillion at the end of the most recent quarter.

Concluding Thoughts

- The credit union industry is evolving and becoming more sophisticated
- Credit unions continue to be an integral part within the US financial systems
- Recent initiatives are present some fairly major changes within the industry
- What is the consensus amongst peers are these events outliers or is there a uniform belief to trend this way
- Are we risking our identify by acting more like banks?
- Could the credit union industry merge with the banking industry?

Dedicated to community banks & their investors since 2003
